Following second strand synthesis, CDNAs were made blunt at the end corresponding to the original 5 prime end of mRNA, and cloned directionally into the NotI and EcoRV sites of Express 1. Note that the EcoRV site is typically destroyed in the blunt end cloning, leaving a junction of the form 'xxxATC' (where is ATC is the second half of the EcoRV site, and xxx is derived from the CDNA sequence). A map of the Express 1 vector is a visitable at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    http://www.openbiosystems.com/cdna_library_construction_fa
q.php#8 The primary library was transformed and amplified
in DH10B (T1 phage resistant) bacteria. Clones available

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   library was constructed in the Express 1 plasmid vector by Open Blosystems. First strand cDNA synthesis was primed with an 54 bp linker primer containing an oligodT sequence preceded by a synthetic NotI site (first strand primer: 5'-GACTAGTTCTAGATCGCGAGCGGCCCC(T)25-3'). Following second strand synthesis, cDNAs were made blunt at the end corresponding to the original 5 prime end of mRNA, and cloned directionally into the NotI and EcoRV sites of Express 1. Note that the EcoRV site is typically destroyed in the blunt end cloning, leaving a junction of the form 'xxxATC' (where is ATC is the second half of the EcoRV site, and xxx is derived from the cDNA sequence). A map of the Express 1 vector is available at: http://www.openbiosystems.com/cdna library construction fa q.php#8 The primary library was transformed and amplified in DHIOB (T] phage resistant) bacteria. Clones are derived from the Trypanosoma brucei GUTat 10.1 sheared
DNA library constructed at TIGR. Clones will be available for
distribution through ATCC. Sheared DNA end sequences search page:

/note="Vector: Express 1; Total and poly A+ RNA was
isolated from the indicated stickleback tissue, and a cDNA
library was constructed in the Express 1 plasmid vector by
Open Blosystems. First strand cDNA synthesis was primed
with an 54 bp linker primer containing an oligodT sequence
preceeded by a synthetic NotI site (first strand primer:
5'-GACTAGTTCTAGATCGCGACCGCCCC(T)25-3'). Following
second strand synthesis, cDNAs were made blunt at the end
cloned directionally into the NotI and EcoRV sites of
Express 1. Note that the EcoRV site is typically destroyed
in the blunt end cloning, leaving junction of the form
'xxxATC' (where is ATC is the second half of the EcoRV
site, and xxx is derived from the cDNA sequence). A map of
the Express 1 vector is available at:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     http://www.openbiosystems.com/cdna_library_construction_fa

This is the 5' sequence of the clone insert Clone from S. Wiemann,
Molecular Genome Analysis, German Cancer Research Center (DKFZ);
Email s.wiemann@kfz-heidelberg.de, sequenced by GBF (National
Research Centre for Biotechnology Ltd., Braunschweig/Germany)
within the cDNR sequencing consortium of the German Genome Project.
This clone (DXFD469B092) is available at the RZPD in Barlin.

Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from a cloned population of mechanically
Trypanosoma brucei (TREU927/4 GUTat 10.1) was mechanically
sheared to give a tight size distribution (approx 2 kb).
The v + i method used for the library construction is
described in detail in Smith, H.O. and Venter, J.C.
(Making small insert libraries for whole genome shotgun
sequencing projects. In Genome Sequencing: A Practical
Approach, eds. M. Vaudin and B. Barell, Oxford University
Press, 1999)."

/conidia germinated in hydrophobic surface membrane in 27C
for 12 hours. NN95 is a hygromycin phosphotransferase gene
replacement of the PMKI MAP kinase gene in the Guy11
strain background (Yu and Hamer. 1996. Genes & Dev.
10:2696). Sequences were processed by one of two methods.
Where a full-length alignment to the M. grisea genome
sequence was available, the EST sequence was trimed
according to the alignment, otherwise sequence quality was
assessed using phredPhrap version 991019 and trimmed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               organism="Magnaporthe grisea"

/note="vector: pBRcDNASfiAB; The library was constructed from 10 different sources of RNA from a single genotype. Separate cDNAs were generated using primers that incorporated unique 5' and 3' tags to distinguish each source of RNA. cDNAs were then pooled, size-fractionated, directionally cloned into a custom medium-copy vector and transformations made with four size classes to minimize size bias. Details of each source of RNA and library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            construction can be obtained at http://cgpdb.ucdavis.edu/

The invention relates to a composition for modulating and/or stimulating comprising bacterial oligoribonuclectides (ORN) with a molecular weight of less than 10 kD. The bacterial ORNs are preferably ADW79934-ADW79936, contain CpG motifs and are resistant to CR when they colonize animals. The immune systems of animals have co-evolved CC when they colonize animals. The immune systems of animals have co-evolved CC when they colonize animals. The immune systems of animals have co-evolved CC invention also relates to a method for the preparation of the bacteria. The CC invention also relates to a method for the preparation of the bacterial CC ORNs by subjecting bacteria to one or more periods of stress, separating the ornewe substances with a molecular weight of more that 10 kD; and a cc method of using the filtrate to modulate/stimulate the immune system of animals to withstand microbial infection. The composition and methods cof the invention are useful for modulating and/or stimulating the limmune system of system of animals (including humans, poultry and livestock), particularly cto withstand microbial infections or the onset of endotwic shock. The parentally, and may also be administered as an adjuvant for oral or compositions may be used to extend the viability of monocytes, thereby improving their capainst ear, nose and vaginal infections. They may further be cability to mature into macrophages to fight infections. They may further be cability to mature into macrophages to fight infections. The composition of the invention contains tows released by either harmless or pathogenic containing them are non-toxic. The present sequence represent a conjugations of the inventions of the inventions. They may further be compositions of the inventions of the inventions of the inventions. They may further be composited to be compositions of the inventions of the inventions. They may further be conjugated to the prevent them from the prevent them are non-toxic. The prevent sequence represents a conjugate of the inventions 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Composition for modulating and/or stimulating immune system of animal useful for withstanding microbial infections and lethality of endotoxic shock, comprises low molecular weight oligoribonucleotide from bacteria.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 5; SEQ ID NO 2; 17pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (MARS/) MARSHALL W

                                                                                                                                                                                   В
                                                                                                                                                                                                                                                                                                                                                                                         comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a companion of control of producing and transformed plant is a crop plant such as maize or soybean. The method of producing a transformed plant convergence of producing a transformed plant with the recombinant DNA construct and growing the transformed plant, where the polymucleotide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with tolerance to plant properties, e.g. improved cold, heat or drought tolerance, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition. This sequence represents a bacterial polynucleotide used in the properties.
                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a
 Bacterial polynucleotide #4369
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1; SEQ ID NO 36408;

CC microbial source. The invention also relates to a transformed plant CC comprising the recombinant DNA construct and a method of producing a CC transformed plant having an improved property. The plant is a crop plant CC such as maize or soybean. The method of producing a transformed plant CC such as maize or soybean. The method of producing a transformed plant CC having an improved property comprises transformed plant with the CC recombinant DNA construct and growing the transformed plant, where the CC polynucleotide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for producing plant, where the CC improved plant properties, e.g. improved cold, heat or drought tolerance, CC increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of content, improved yield by modification of carbohydrate, nitrogen or CC content, improved yield by modification of arbohydrate, nitrogen or CC condition, improved lignin production or improved galactomannan CC production. This sequence represents a bacterial polynucleotide used in CC production. This sequence represents a bacterial polynucleotide used in CC condition, improved plant growth and development under at least one stress condition, part of the printed specification but was obtained in electronic format from USPTO at segdata.uspto.gov/sequence.html.

ACA25094 standard; DNA; 1986 BP.

```
The invention relates to an isolated nucleic acid comprising any one of CC the 6213 antisense sequences given in the specification where expression CC (1) a vector comprising a promoter operably linked to the nucleic acid (2) a vector comprising a promoter operably linked to the nucleic acid (2) a host cell containing the vector; (3) an isolated CC nucleic acid; (2) a host cell containing the vector; (3) an isolated CC polypeptide or its fragment whose expression is inhibited by the antisense CC antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular CC proliferation or the activity of a gene in an operon required for CC the gene product or that has an activity against a biological pathway CC required for proliferation, or that inhibits cellular proliferation; (8) cellular proliferation or the biological pathway in which a proliferation required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an CC compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of collection of the strains; or (13) identifying the target of a compound that inhibits the collection of identifying the strains. The antisense nucleic acids are useful for identifying the capable of a compound that inhibits the collection of the strains or the strains of the strains of the collection of the strains.
                       identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at free who intrompt, which into account for the printed or account of the printed or the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Wang

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                  The invention relates to a recombinant DNA construct comprising a comproter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a comprosising the recombinant DNA construct and a method of producing a crop plant comprising the recombinant DNA construct and a method of producing a crop plant comprising an improved property. The plant is a crop plant comprising an improved property comprises transformed plant with the crecombinant DNA construct and growing the transformed plant, where the composition of producing a transformed plant the crop plant comprises transformed plant with the crecombinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with comproved plant properties, e.g. improved cold, heat or drought tolerance, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition improved plant growth and development under at least one stress condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

        The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibited by the polypeptide; (7) identifying a gene in an operon required for proliferation or the activity of a gene in an operon required for required for that has an activity against a biological pathway required for proliferation, or that his an activity against a biological pathway in which a proliferation required gene or its gene product lies pathway in which a proliferation required gene product lies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

The invention relates to a polynucleotide comprising an RNA sequence. The polynucleotides, vector, libraries, and method are useful in lowering the amount of RNA and/or protein production in cells used in drug development process. The present sequence represents a knock-down target sequence.

New knockdown sequences, useful in lowering the amount of RNA and/or protein production in cells used in drug development process.

The present sequence is one of prokaryotic essential genes. Note: The sequence data for this prot form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/nub/wwb14.bd.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for proliferation of an organism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 2460 BP; 556 A; 704 C; 776 G; 424 T; 0 U; 0 Other;

Where the (sub-)transcriptome comprises several cc oligonuclectides, each capable of hybridising selectively to a set of messenger RNAs transcribed from a given transcription unit of the genome, composition or more messenger RNA splice variants. The coligonuclectide libraries are useful for detecting mRNAs from a color of coligonuclectide libraries are useful for detecting mRNAs from a color of coligonuclectide libraries are useful for detecting mRNAs from a color of color of the sequence and in color of color o

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ś
                                                                                                   complementary to, a segment of an open reading frame (orf) of Escherichia (coli K12. The blochip is used for specific detection of gene expression (coli K12. The blochip is used for specific detection of gene expression (coli K12 and for determining the gene expression pattern, e.g. for (coli K12 and for determination of which E. coli strains are present in the gut, and to determine the effects of e.g. growth media on gene expression. The colichip provides as comprehensive as possible detection of the K12 and its mutants or comparison of gene expression between K12 and its mutants or cother E. coli strains in a single experiment. Apart from qualitative and comparison of gene expression between K12 and its mutants or cother E. coli strains in a single experiment. Apart from qualitative and contains in grobe expression, it also allows measurements of population densities for the various strains. The use of synthetic oligonucleotides for preparation of probes allows free containtion in probe length and ensures high purity (and thus selectivity, cand reproducibility), also synthetic probes are generally containtion of probes are generally containtion of probes are generally containtied of probes are generally in the invantion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ACD68769 standard; DNA; 100

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel biochip comprising probe spots, each containing many identical probes. The probes are nucleotide sequences of 30-80 bases, are prepared ex situ from synthetic oligonucleotides and at least one includes a segment of at least 20 bases identical with, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 3; Page 17; 2004pp; German.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Biochip containing probes complementary with open reading frames in Escherichia coli K12, useful for detecting gene expression and expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2003-241155/24.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Donner H,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            17-MAY-2001; 2001EP-00112179

The biochip provides as comprehensive as possible detection of the K12 genome, with simultaneous analysis of many different genes with a single device, and comparison of gene expression between K12 and its mutants or other B. coli strains in a single experiment. Apart from qualitative and quantitative information about gene expression, it also allows measurements of population densities for the various strains. The use of synthetic oligonucleotides for preparation of probes allows free variation in probe length and ensures high purity (and thus selectivity, reactivity and reproducibility), also synthetic probes are generally shorter than probes prepared by polymerase chain reaction. ACD66731 to ACD66731 to appreciate the probes are generally shorter than probes of the probes used with the blochip described and the second appreciation of probes are generally shorter than probes of the probes used with the blochip described and the probes of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       10-80 Dasee, and programmer of at least 20 bases identified includes a segment of an open reading frame (orf) of Escherichi complementary to, a segment of an open reading frame (orf) of Escherichi complementary to, a segment of an open reading frame (orf) of gene expression coli K12. The blochip is used for specific detection of gene expression coli K12. The blochip is used for specific detection of gene expression pattern, e.g. for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel biochip comprising probe spots, each containing many identical probes. The probes are nucleotide sequences 30-80 bases, are prepared ex situ from synthetic oligonucleotides and least one includes a segment of at least 20 bases identical with, or

                                                                                                                                                                                                              This invention relates to a gene encoding a formate dehydrogenase from Hyphomicrobium sp. A transformant containing the new gene is used for the preparation of formate dehydrogenase of high specific activity, low Michaelis constant (Km) value against formic acid and NAD+, high temperature stability and high pH stability. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a recombinant DNA construct comprising a CC provide for expression of a polynucleotide encoding a polypeptide from a CC microbial source. The invention also relates to a transformed plant CC comprising the recombinant DNA construct and a method of producing a CC transformed plant having an improved property. The plant is a crop plant CC such as maize or soybean. The method of producing a transformed plant are combinant DNA construct and a method of producing a recombinant DNA construct and growing the transformed plant, where the CC polynucleotide or polypeptide is useful for improving plant with the CC improved plant properties, e.g. improved cold, heat or drought tolerance, improved plant properties, e.g. improved cold, heat or drought tolerance, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or CC content, improved yield by modification of photosynthesis or by cc providing improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan CC production. This sequence represents a bacterial polynucleotide used in the scope of the printed specification but was obtained in electronic format from USPTO at sequence.html.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  treating invasive Aspergillus fumigatus infection, including the allergic forms of the disease, such as Farmer's lung disease. They can also be used in various drug discovery purposes, such as expression of the recombinant protein, hybridization assay and construction of nucleic acid arrays. The present sequence represents an Aspergillus fumigatus essential gene open reading frame, used during diagnosis and drug development in the invention. These genes share a high degree of sequence conservation with known essential genes of candida albicans. The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format from WIPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding semicones of the invention Note. The segmence data for this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 diagnostics, for responsible for biodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Fungicide; Aspergillus fumigatus infection; Farmer's lung disease; drug screening; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              reaction (PCR)
New purified or isolated encoding a gene product,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  essential gene sequence containing all introns, used during diagnosis and drug development in the invention. These genes share a high degree of sequence conservation with known essential genes of candida albicans. The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format from WIPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      used in various drug discovery purposes, such as expression of the recombinant protein, hybridization assay and construction of nucleic acid arrays. The present sequence represents an Aspergillus fumigatus essential gene semisoro contributor of increases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        treating invasive Appergillus fumigatus infection, including the allergic forms of the disease, such as Farmer's lung disease. They can also be used in various drug discovery purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo sapiens.
